

About DIS4SME Project

The European Project DIS4SME will offer high-quality training courses that aim to upskill employees of Small and Medium Enterprises (SME) in the design and deployment of effective Digital Transformation strategies. SME owners, managers, and employees face several knowledge gaps in responding to the digital challenges related to data policies and technologies.

The DIS4SME Project, co-funded under the Digital Europe Programme, aims to implement courses on location data interoperability that can be applied in real work environments and the broader geospatial domain.

The courses aspire to develop skills that can boost the entrepreneurial potential of European SMEs, help businesses grow, support the development of new products & services, and open new markets.

The courses will offer content that is suited to the current and future needs of SMEs in the form of baseline knowledge, state-of-the-art technology, and policy trends.

Location data interoperability is the ability of organisations, systems and devices to exchange and reuse data with direct or indirect reference to a specific location or geographical area.

DIS4SME Training Offer

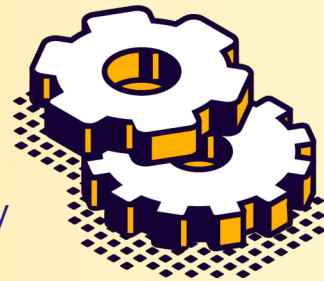

The project will design and deliver short-term training courses for upskilling and reskilling of the labour force, with a particular focus on SMEs owners, managers and employees.

DIS4SME delivers three types of courses (on-line and in presence):

- ◆ Short - term courses (max 2 days) for SME owners and managers
- ◆ Short - term courses (max 2 days) for SME employees and job seekers
- ◆ Intensive seminars and workshops (max 1 day) focused on Business Cases
